Point of Sale Solutions
Improve productivity, speed up transactions and deliver great service

Fast to implement, customisable to your needs and easy to use, Verteda POS solutions enable you to speed up transactions, improve accuracy and deliver an outstanding customer experience.

Verteda POS solutions enable you to process transactions and deliver great customer service in even the most demanding high-volume environments, without any loss of quality and performance at the point of sale. Delivering high performance and high availability, alongside feature-rich tools that enable you to increase productivity and seamless links to other systems and processes for inventory and procurement, stock control, CRM and more, Verteda POS solutions mean you can align all POS activity across foodservice, hospitality and retail with customer-facing service requirements, venue specifics and industry best practice.

Award-winning software – and flexible cloud-based delivery

Verteda uses Agilysys InfoGenesis™ POS software from Agilysys, Inc. to deliver the most advanced POS solutions. This award-winning software is specifically designed to help you serve guests more effectively while enhancing your efficiency and profitability.

Verteda POS solutions are also available via flexible Software as a Service (SaaS) delivery: using reliable Internet connections to deliver essential functionality to your venues and outlets via centralised servers at a secure data centre. You have immediate access to industry-leading technology but with no need to invest in expensive infrastructure or support personnel – enabling you to reduce CAPEX and to focus on your core competencies as a business while Verteda takes care of systems management. Features of this cost-effective subscription option include:

- Performance Monitoring & Healthchecks
- Full System Backup & Recovery
- Executable configuration and maintenance
- 24/7 Hotline Technical Support
- Software / Patch Updates
- Online Technical Support - Online Knowledge Base

Making POS work harder for you

We implement the most flexible, adaptable and high-value POS solutions available to your business:

- Easy to set up and maintain
- Consistent terminal configuration, pricing and screen setup
- Staff can be trained quickly and easily
- Item images on buttons make customer ordering fast and easy
- Scalable architecture so you can add more terminals and workstations without needing to build-out expensive infrastructure
- Integrates seamlessly with other applications - including mobile POS, online pre-orders, self-service options, property management, inventory and procurement, CRM, business analytics and reporting
- Peace of mind: offline capabilities mean a terminal can continue working during server or network outages, synchronising data as soon as a network connection re-establishes and if a POS terminal hardware fails, you can simply assign the same identity to a different terminal

Responsive, reliable and powerful: world-class capabilities at the point of sale

Verteda puts you in control, with enterprise-level POS capabilities and centralised configuration management that support operation-specific, audit-based and guest-centric reporting to cover all areas of your operation. Real-time reporting means you can react more quickly and appropriately to immediate operational demands and better serve guests – meaning the potential to increase customer spend "on the fly". At the same time, reports can be generated and shared easily, based on consistent numbers across the entire operation and enabling you to:

- Review spending patterns
- Capitalise on revenue opportunities
- Cut costs and plan more effectively

Additional Features	Benefits
Combination Packages - Prix Fixe Menus	Flexible and secure package configuration at the POS terminal for combination meals, prix fixe menus and other packages
Gift Card Support	Interface to a range of campus and gift card systems for streamlined sale, balance inquiry and redemption of provider's cards
POS Generic Authorisation	Customers can charge purchases to an internal charge account, prepaid or with a credit limit; account activity can be exported to a third party system e.g. payroll
Audit Log and Electronic Journal	Track system configuration changes with easy to use query tools that include advanced sorting and filtering
PA-DSS and PCI DSS Compliance	Comply with standards for the security and protection of credit card data
Certified on Microsoft® Windows Server® 2008 R2 and Microsoft SQL Server® 2008 R2	Increases scalability and simplifies adding data storage
SQL Server Reporting Services (SSRS)	Maximum flexibility when creating reports
Terminals Certified POSReady7	Eases connectivity to Windows®, streamlines deployment and management
Universal Desktop	Access all aspects of configuration and all utilities from a single intuitive user interface; installs via a Web browser
System Management Utility	Administer and track connectivity, software version and availability of each POS terminal remotely
